

In the Specification

Please amend the specification as follows. (All references are to the clean copy of the substitute specification filed March 25, 2008.)

Page 2

Amend the second paragraph as follows:

—DE 29414974 29714974 U1 describes a handle of a screwdriver which comprises two parts fitted into one another. A handle part which includes a cavity has an opening into which a second handle part, which carries the blade, is fitted in its entirety. The handle part which carries the blade stores screwdriver bits.

Page 7

Amend the first paragraph as follows:

—The handle illustrated in Figures 1 to 7 can be provided with a fixed blade or an exchangeable shank. The blade or the exchangeable shank is accommodated in a blade receiving part 23. The way in which the exchangeable shank in question here functions is described in detail in DE 10233866.3, ~~for which reason the disclosure content of this application is hereby incorporated in its entirety.~~—

Amend the third paragraph as follows:

—The handle part 1 has a core 4 which receives the blade or the exchangeable shank. In the closed position illustrated in Figure 3, this core is located entirely within the cavity 3. On the outer side, the core has a plurality of compartments running in the axial direction. In each of these compartments there is a screwdriver bit 11. In the open position of the storage chamber 6 formed by these compartments (cf. Fig. ~~1~~ 6) (cf. Fig. 6), the screwdriver bits can be removed or inserted again.

Delete the fourth paragraph.

Page 8

Delete the first three paragraphs.

Page 9

Amend the last paragraph as follows:

—In the closed position (Figures 2, 3), the compression spring 16 is stressed. If the push-button is pressed in this state, as shown in Figure 14 5, the control slopes 30 of the spring tongues 15 are acted on by the actuating cams 29. Pressing the push-button 8 causes the end edge of the actuating cam to slide along the control slope 30. In association with this sliding movement, the end portion of--
